DETAILED ACTION

Response to Arguments

- 1. Applicant's arguments with respect to claims 37-43 have been considered but are most in view of the new ground(s) of rejection.
- 2. The amendments to claims 1-22 and 44-50 overcome the previous rejections to these claims. The rejections of claims 1-22 and 44-50 are therefore withdrawn.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 37-39 and 44-46 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vanderschuit et al. (US 5,093,763).

[claim 44]

Regarding claim 44, Vanderschuit discloses an apparatus for multi-spectral image capture of a first scene, the apparatus comprising: an image acquisition system (c. 1, II. 10-24) and a set of two or more illuminants, each illuminant having a different spectral power distribution and illuminating one of the images of the first scene (c. 5, II. 37-60). While Vanderschuit discloses the use of a camera to capture multiple exposures of the scene, Vanderschuit does not disclose a camera having an imaging

Art Unit: 2622

sensor which has a set of color filters thereon and has two or more color channels, each of the color channels having a different spectral sensitivity.

Page 3

Official Notice is taken that the use of digital cameras including an imaging sensor with a set of color filters thereon (e.g. RGB filters) and having two or more color channels with different spectral sensitivity (e.g. R, G and B channels) is notoriously well known in the art. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use a digital camera including a color imaging sensing device and having multiple color channels to capture the multiple exposures described in Vanderschuit to allow for instant review of the captured scene and image capture without the need for film processing steps.

[claim 45]

Regarding claim 45, Vanderschuit discloses combining the filtered images into a single image (i.e. generating a multi-spectral scene description; c. 1, ll. 10-24).

[claim 46]

Regarding claim 46, Official Notice is taken that it is notoriously well known in the art that cameras can be used to capture more than one scene. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to reuse the camera and illuminant system of Vanderschuit to capture a second series of images of a second scene as claimed to obtain images of a first scene and second scene without requiring a second image capturing system.

[claims 37-39]

Application/Control Number: 09/692,923

Art Unit: 2622

Claims 37-39 are method claims corresponding to apparatus claims 44-46.

Page 4

Therefore, claims 37-39 are analyzed and rejected as previously discussed with respect

to claims 44-46.

Allowable Subject Matter

5. Claims 1-22 are allowed.

[claims 1-22]

Regarding claims 1-22, the prior art does not teach or fairly suggest an image

capture system or method in which a first series of images is acquired by one or more

image acquisition systems including an imaging sensor with a set of color filters thereon

and having two or more color channels; and filtering each of the first series of images

with a different filter from a set of non-interference color filters having different spectral

transmittances wherein the filters are positioned between the scene and the one or

more image acquisition systems. While the use of color filters (e.g. color wheels, IR cut

filters, etc) are known in the art, the use of these filters to capture a series of image by a

camera which includes an imaging sensor having a set of color filters thereon is not

taught or suggested.

6. Claims 40-43 and 47-50 are objected to as being dependent upon a rejected

base claim, but would be allowable if rewritten in independent form including all of the

limitations of the base claim and any intervening claims.

[claims 40-43 and 47-50]

Regarding claims 39-43 and 46-50, the prior art does not teach or fairly suggest an image capture system or method of capturing a series of images in which each image is illuminated by a different illuminant and capturing a second series of images of a second scene using a second series of illuminants and generating a characteristic mapping from the second series of filtered images as claimed.

Page 5

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Timothy J. Henn whose telephone number is (571) 272-7310. The examiner can normally be reached on M-F 9:00 AM - 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vivek Srivastava can be reached on (571) 272-7304. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
